35.3	I-17 Bridge	2.0	1.5	1.0
37.3	Black Bridge	2.2	2.0	1.25
39.5	White Bridge	5.5	3.0	2.0
45	Clear Creek	4.3	3.0	2.0
49.3	Beasley Flat	See boaters guide	-	-
100.8	Sheep Bridge	-	-	-

Verde River flows can vary widely during any year or season. Low flows (<100 cfs) are typical, and boating is challenging if flows are <50 cfs. During the early summer months, the section between Clear Creek RAP and Beasley Flat may be the only boatable segment in this guide. Autumn through spring months provide the best boating flows. Floods can occur during spring snowmelt, after rain-on-snow events or following summer storms. Do not paddle during flood events.

Check real-time flow at: <http://waterdata.usgs.gov/az/nwis>
